# Vision

*“Economies of scale are a good thing. If we didn’t have them, we’d still be living in tents and eating buffalo.”*

Jamie Dimon

Harness the power of economy of scale to catapult your project and allow you to focus on your vision and most importantly, free your users from the burdens of dealing with technological issues.

Our vision is to empower you to free your users from the headaches, hassles, and technological prowess needed dealing with blockchain backed companies.

We make large scale, low cost, low maintenance solutions available with ease and limited effort.

We will accomplish this by working with technology providers and in-house professionals who can streamline processes and tasks to ensure maximum efficiency with minimum overhead. Our developers will monitor, maintain, and constantly improve our (your) systems to provide peak uptime and highly available solutions. We will hide the difficult and troublesome activities associated with backend systems from your team’s responsibilities so they can spend their time realizing your unique vision. But, the key to all of this (and the key to your success) is the health, happiness, and freedom from frustration your users are looking for.

Let us, let you, let your users succeed.

# Our Services

We will provide virtually any and all backend solutions and services needed for any blockchain company. These include but are in no way limited to the following..

- Wallet development
  - New coding
  - Troubleshooting/upgrades/enhancements
- Seed nodes
  - Let us set up, maintain, and host redundant, highly available wallets to seed, feed, and bring health and responsiveness to your blockchain network
- Explorers
  - Snappy, useful, and state of the art explorers are critical in today's cryptocurrency world. We can provide all the necessary servers and system resource requirements you need to ensure your users have the tools they look for.
- DNS Services
  - Let us take the headache and confusion out of DNS maintenance and upkeep. We guide you, or you tell us what is needed and we put it into action.
- Electronic mail routing
  - Automate notifications, newsletters, and announcements.
- Robots/Automated processes
  - Stop wasting time doing things more than once and let us create robots or automated processes to do the work for you.
  - Discord/Telegram bots
  - Social media bots
- Masternodes
  - Masternode automated script creation
  - Unlimited masternode hosting ability
  - Monitoring solutions
- Technology training
  - End-user training
  - Staff training
  - documentation/videos

# Our Platform

The NodeZero Platform (NZP) will be a central hub for all the services we provide. The platform will list project information and house tools for investors. Projects requiring our services will automatically be listed on the platform if they wish to. Projects can also be added to the platform if they do not require any services from us.

Because we will be providing backend services in mass, we can utilize economy of scale to provide services to projects with low or no costs incurred to the project team. Projects can utilize “free” services that we will offer that are simply hosted on lower availability servers and systems or are supported by advertisements. Subscription based services will accept NodeZero coin on set schedules that “refill” or “top up” the service agreement for a project. Examples can be explorers, seed nodes, or robots that projects can use freely which contain advertisements embedded in the webpage or service or require a set number of NodeZero coin as payment on a recurring schedule. In this way, the platform will drive demand for NodeZero coin while also supporting and expanding the NodeZero Platform and services. The more hardware that we can accumulate, the cheaper we can offer the services using that hardware.

Key points that the platform will provide for our investors or external coin projects:

- Centralized information regarding projects listed
- Investor tools
- Investor training
- Fee based, advertising based, or subscription-based services (ie. Explorers, seed nodes, DNS servers, robots)
- Advertising services for projects
- Limited or unlimited masternode hosting for coin projects to offer to their investors

# Our Coin

The main use-case for NodeZero (NZR) coin will be for coin projects to pay for subscription-based services on the NodeZero platform.

Virtually all of our services can be implemented as subscription based, but the most common we foresee are explorers, seed nodes, robots, or advertisement slots that are paid for on a recurring schedule or when they are needed to be “topped up” or “refilled”.

While the NodeZero platform will always provide masternode hosting of NZR nodes for free for any and all individuals, owning and running a masternode of NZR will bring additional benefits to an individual. The benefits of owning and running a masternode of NZR will change and evolve over time, but we plan to always include free node hosting of coins other than NZR to individuals who own a masternode of NZR. The number of free hosting slots will depend on current market situation and changes in backend hardware prices, but our goal is to never remove a benefit once it has been granted to an individual. Meaning, if you are given 10 free node hosting slots today, we plan to grandfather you in for any changes needed going forward and you will never have fewer than 10 free node hosting slots regardless of what happens in the future. We would never want to force you to move your nodes to a different service or force you to upgrade anything to keep your current level of service. This concept will reward (and show our gratitude to) early investors in our project.

## Looking forward

Once we have made a name for ourselves and our platform is stabilized, we are looking at adding many features. This list may (and likely will) change, but the items we have penciled in for our future plans are....

- Escrow services (either as fee based, or as a benefit for our masternode holders)
- Pre-sale services
- Specialized training only available to our masternode holders

# Coin Specifications

Coin Name: NodeZero  
Coin Ticker: NZR  
Consensus Algorithm: POS (with masternodes)  
Algorithm: Quark  
Block Time: 2 minutes  
Coinbase Maturity: 15 blocks  
Minimum Stake Age: 1 hour  
Minimum Stake Amount: No minimum  
Total Supply: 40,000,000  
P2P Port: 52271  
Masternode Reward: 73% of block reward  
Staking Reward: 25% of block reward  
Dev Fee: 2% of block reward

## Coin Emissions

Start Block	End Block	Block Reward	Masternode Collateral	Masternode Reward	Staking Reward	Dev Fee
1	10000	0.25	1000	0.1825	0.0625	0.005
10001	40000	0.6	1000	0.438	0.15	0.012
40001	160000	0.9	1000	0.657	0.225	0.018
160001	280000	1.4	1000	1.022	0.35	0.028
280001	400000	2.6	1000	1.898	0.65	0.052
